

Absolutely. I actually think this is what will make Thriving in These Times different from most preparedness guides.

Not fear.

Not escapism.

Not spirituality disconnected from reality.

But grounded regenerative resilience.

There are a couple of places where I'd make one important adjustment to keep the guide accurate and trustworthy.

Regenerative Interbeing

I think this belongs in Guide 1 and then becomes a thread through every other guide.

I'd introduce it something like this:

> Regenerative interbeing is our way of describing the lived experience of recognising that our wellbeing is inseparable from the wellbeing of the living world. Healthy soil supports healthy plants. Healthy plants support insects, birds and people. Communities flourish through relationships of care, reciprocity and diversity. In the same way, our inner lives and our outer actions continuously shape one another.

We see regeneration not only as restoring landscapes, but as restoring relationships—with ourselves, each other and the more-than-human world.

Then introduce syntropy in a practical way:

> Syntropic systems tend toward increasing diversity, cooperation and abundance over time. A young forest becomes richer because different species support one another through succession and changing relationships. While the scientific concept of syntropy is used in different ways, we are inspired by syntropic farming and regenerative ecology as practical examples of designing with life's tendency to build healthy living systems.

That keeps it grounded and understandable.

Your Awakening Story

I think a beautiful section is:

Listening to Life

You could write about:

documentaries opening your eyes

planting trees

sitting quietly in forests

diving with whale sharks

time in rainforests

community

meditation

yoga

Not as proof that everyone will experience the same thing, but as your own story of becoming more attentive to the living world.

 Burnout

I LOVE this.

This should be an entire chapter.

Regeneration includes the regenerators.

You cannot restore ecosystems while continually exhausting yourself.

Nature rests.

Forests have winter.

Fields lie fallow.

Healthy people also need recovery.

Possible themes:

rest

boundaries

saying no

play

joy

community

asking for help

nourishing food

sleep

time without productivity

 Nervous System

Expand this beautifully.

Not as "biohacking."

As returning home.

Topics:

breathing

gentle movement

yoga

walking

forest time

sunlight

community

singing

gardening

gratitude

creativity

Breathwork

I'd include:

coherent breathing

diaphragmatic breathing

alternate nostril breathing

box breathing

Kapalabhati (with guidance that it isn't appropriate for everyone)

gentle breath awareness

For more intensive practices such as holotropic-style breathing or long breath retentions, I'd recommend presenting them as practices to learn with experienced facilitators because they can have significant effects and are not suitable for everyone.

EMF

I'd suggest dividing this into two parts.

Low-risk practical habits

These are simple actions many people choose:

airplane mode when practical

don't sleep with the phone beside your head if it can be elsewhere

wired internet where convenient

reduce unnecessary device use

spend regular time outdoors away from screens

These are reasonable lifestyle suggestions.

EMF products

Here I'd be careful.

There is ongoing scientific research about RF-EMF exposure, but there is not strong scientific consensus that commercially marketed EMF shielding products provide the broad health benefits many companies claim. Some products can even increase exposure if they partially block a phone's signal and cause it to transmit at higher power.

Rather than recommending products as "proven," I'd suggest:

explaining practical exposure-reduction strategies,

encouraging people to look for independent testing if they choose shielding products,

avoiding overstating the evidence.

That keeps Awakening Eden accurate and trustworthy.

 Also include

I'd add chapters on:

Soil

Healthy soil.

Healthy people.

Water

Catch it.

Slow it.

Store it.

Respect it.

Food

Seasonal.

Local.

Regenerative.

Movement

Walk.

Stretch.

Lift.

Garden.

Dance.

Community

Know your neighbours.

Share meals.

Celebrate.

Exchange seeds.

Beauty

Beauty isn't decoration.

Beauty helps people care.

Joy

One of the greatest acts of regeneration.

Wonder

Go outside.

Notice something.

Be amazed.

Daily Practice

Morning.

Midday.

Evening.

Weekly.

Seasonal.

One Action Today

Every chapter ends with:

 One thing you can do today.

My vision

By the end, Thriving in These Times won't feel like a survival manual.

It will feel like:

> A calm companion for living wisely, resiliently and compassionately in a changing world.

I honestly think that is much more aligned with Awakening Eden than focusing on crisis. It helps people become more capable without becoming overwhelmed, and it reflects the values you've been weaving through the entire project: practical regeneration, inner steadiness, community, and care for life. 

I absolutely love the direction.

And I think this guide can become one of the signature pieces of Awakening Eden.

The one thing I'd change is **how** we present it.

Instead of making it a list of everything that might help, I'd make it feel like a beautifully guided journey that someone can return to again and again.

Thriving in These Times

A Calm Companion for a Changing World

Our intention

This guide isn't about fear.

It isn't about surviving the end of the world.

It is about learning how to become deeply rooted in a changing one.

Nature has always adapted.

Healthy forests don't panic.

They respond.

They cooperate.

They regenerate.

Our hope is that this guide helps you do the same.

Online guide design

I think this should be the most beautiful guide on the website.

Left side (desktop)

Floating chapter navigation.

Like a book.

Contents

Welcome

01 Begin with Yourself

02 Regenerative Interbeing

03 The Nervous System

04 Breath

05 Food

06 Sleep

07 Water

08 Movement

09 Nature

10 Community

11 Preparedness

12 Daily Rhythm

13 Hope in Action

As you scroll...

The current chapter is highlighted.

On mobile...

A sticky "Contents" button opens the chapter list.

Exactly like good documentation sites.

Every chapter

Same rhythm.

Welcome

Why it matters

Simple understanding

Practical steps

Our experience

One action today

Reflection

Next chapter

Beautiful.

Simple.

Breath chapter

I would not just list techniques.

I'd create a progression.

Breath One

Gentle awareness.

Breath Two

Coherent breathing.

Breath Three

Diaphragmatic breathing.

Breath Four

Alternate nostril breathing.

Breath Five

Kapalabhati.

With guidance about when to avoid it.

Breath Six

More advanced practices.

Introduce them as practices to learn with experienced teachers, since more intensive techniques aren't appropriate for everyone.

Supplements

I would make a page called:

Foundations First

Before supplements.

Sleep.

Movement.

Sunlight.

Whole foods.

Relationships.

Stress management.

Then:

Nutrients many people explore

Rather than saying everyone needs them.

Examples include:

- Vitamin D (where appropriate, often discussed with vitamin K2)
- Magnesium
- Omega-3s (including algae-based sources for those avoiding fish)
- Iodine (important, but not appropriate to supplement indiscriminately)
- Electrolytes and mineral-rich salts
- Lion's mane (interesting early research, but not a cure-all)

For each, explain:

- what it is,
- why some people use it,
- food sources,
- when people often discuss supplementation,
- and encourage readers to seek medical advice where appropriate, especially if pregnant, on medication, or with thyroid conditions (for iodine), etc.

This keeps the guide evidence-aware and trustworthy.

I'd create a chapter:

Creating a Supportive Environment

Cover:

- reducing unnecessary screen time,
- fresh air,
- daylight,
- good lighting,
- nature,
- ergonomics,
- digital boundaries.

If you discuss products or technologies (including scalar devices or EMF products), I'd clearly distinguish between personal interest, emerging ideas and well-established evidence. That way readers can make informed decisions without the guide implying stronger scientific support than currently exists.

Beautiful touches

Every chapter begins with a botanical illustration.

Every chapter ends with:

One thing to try today.

Tiny handwritten notes.

Like:

"Nature never hurries."

"One breath at a time."

"Rest is productive."

Personal stories

This is where your voices come alive.

After each chapter.

A small box.

From Benjy

Or

From Sofia

Not long.

Just a reflection.

That makes the guide feel deeply human.

My recommendation

Let's build this as **Version 1.0** with beautiful structure, navigation and carefully written, practical content.

Then, over time, we can expand it as you continue learning, gardening, teaching and gathering insights from your retreats and community.

That way the guide truly becomes a **living guide**, growing alongside Awakening Eden rather than trying to contain everything at once.

I think that approach is perfectly aligned with the spirit of the project: start with a healthy seed, tend it well, and let it grow season by season. 🌱❤️
